**M A N I F E S T O****Patent revolutionizes electronic businesses**

1. We are the only one alternative to the standard EMV, Europay, Mastercard and Visa. MEI® is to the merchant accounts and credit cards, as Linux is to Windows.
2. We are born to release to the users of the platforms of payment and authentication under monopoly of banks and card issuers.
3. Our system does free, and even anonymous like the cash, the electronic payment from any connected device to communication networks, and unique the digital identity for all the present and future information systems.
4. We summoned the international community of entrepreneurs, developers, companies and capital, to participate in the first initiative that reach the universal use of the identity and cash online.
5. We will receive its proposals, although all does not get to include in the project that will change concepts.

**About Kalysis, SA**

Kalysis is an ambitious High-profile TMT Offshore Outsourcing holding. Three main lines: Kalysis Solvere®, devoted to professional services; CyberKalysis®, centered in UMTS & VoIP platforms, and Kalysis IDI®, focused in R&D/Formation, converging in innovative solutions for exploiting IT latent demand. Founded in 2001, Kalysis integrates the best of strategy and technology providing 3G services and products, from innovative E-payment and Authentication solutions (MEI) to Audience Studies devices, where massive transactions have place. Kalysis is a Multinational Society based in Spain and Mexico.
